

Quick Start Guide: Delivery Mission Management App

First initialization:

Before running the app you must:

- 1- Make sure python version 3.12 is installed. `python3 -version`
- 2- Install virtual env. `python3 -m venv venv`
- 3- install the necessary packages. `pip3 install -r requirements.txt`

The app has two main views:

1. Mission Creation (for drivers or dispatchers)
2. Delivery Approval (for supervisors or warehouse stakeholders)

Page 1: Creating & Submitting a Mission

Who uses this screen?

Drivers, logistics clerks, or anyone who needs to create a delivery mission and list the articles being transported.

What you see (source interface)

- Driver Information
- Mission Information
- Add Article section
- Articles table
- Remove Selected Row button
- Submit button

Step-by-step instructions

1. Fill in driver details

- Name – Enter the driver's full name (e.g., abderrahim).
- License – Enter the driver's license number.
- Image – Click *Upload Image* to add a photo of the driver (this helps the approver verify identity).

2. Complete mission information

- Status – Usually set to In Progress while you're editing.
- Truck – Select the truck code (e.g. MR04 - TRK000004).
- Source – Enter the departure city/warehouse (e.g. oran).
- Destination – Enter the delivery destination (e.g., djelfa).

3. Add articles to the mission

- In the *Add Article* section, search and select an article from the dropdown (e.g. AR03).
- Enter the quantity (if a quantity field appears – otherwise the app may set default 1).
- Click Add to Table.
- The article and its quantity appear in the Articles table.
- Repeat for each additional article.

4. Manage articles in the table

- To remove an article: select the row (click on it, depending on your device), then click Remove Selected Row.
- The table updates immediately.

5. Submit the mission

- Review all driver, mission, and article information.
- Click the Submit button.
- The mission is now saved and ready for approval by a stakeholder (e.g., warehouse manager).

Example mission (based on the screenshot)

Field	Value
Driver name	abderrahim
License	abderrahim
Truck	MR04 - TRK000004
Source	oran
Destination	djelfa
Article	AR03 / Quantity 1

After submission, the system will generate a Mission ID for tracking.

Common mistakes to avoid

- Forgetting to upload a driver image.
- Submitting without any articles.

Page 2: Approving or Rejecting a Delivery

Who uses this screen?

Supervisors, warehouse managers, or delivery approvers.
You will see missions that are pending your review.

What you see (destination interface)

- Card Information – Mission ID, Truck ID, Status, From, To
 - Driver Information – Name, License, Photo
 - Articles table with codes and quantities
 - Approve Delivery button
 - Reject button
 - Back button (to return to mission list)
-

Step-by-step instructions

1. Access a pending mission

- From the main dashboard, select a mission with statu Pendin.
- Example shown: Mission ID: MSN00021, Truck ID: TRK00006, From: oran, To: djelfa.

2. Verify driver information

- Check the Driver Name.
- Verify the License.
- Check the Photo.

3. Review the articles

- Examine the Articles table (article codes and quantities must match the delivery note).

- Example: AR03 with quantity 1.

4. Make a decision

Approve Delivery

- Click Approve Delivery only if:
 - Driver and license are correct.
 - Photo is present and matches.
 - All articles and quantities are accurate.
- The mission status will change to Approved (or Completed), and the driver is notified.

Reject

- Click Reject if any information is wrong, missing, or suspicious.
- Reason for rejection (if the app asks) – briefly explain (e.g., “Wrong driver photo” or “Article quantity mismatch”).
- The mission returns to the creator for correction.

5. Navigate between missions

- Use the Back button to return to the list of pending missions and review another one.
